

WashU*Continuity*

Come learn how to develop a Continuity Plan for your department.

The Continuity Plan Workshop will introduce the audience to adaptive business continuity planning for their department by focusing on capabilities and building plans based on resources, competencies, and procedures. In addition, this workshop will introduce the audience to developing recovery strategies to the most common issues areas face: loss of staff, IT applications, resources, power, water, access to primary building, and vendors. Additionally, the audience will be introduced to the resource library on the WashU Continuity website to assist them in beginning to develop an adaptive business continuity plan for their area.

Audience: Anyone that wants to learn more about business continuity or has been tasked with developing a business continuity plan.
